PROFESSIONAL SUMMARY

Aspiring Data Engineer (B.Tech CSE, Data Science & AI) building end-to-end ELT pipelines in Python and SQL with Medallion Architecture, on both a MySQL warehouse and a PySpark/Delta Lake lakehouse. Hands-on with dimensional modeling, schema contracts, automated data-quality testing and pipeline monitoring. Seeking a data engineering internship or entry-level role.

EDUCATION

Integral University, Lucknow, India Jul 2023 – May 2027
B.Tech, Computer Science & Engineering (Data Science and AI) | CGPA: 7.8/10.0 (6th Sem.)

- Relevant Coursework: Database Management Systems, Data Structures & Algorithms, Cloud Computing, Big Data Analytics, Machine Learning

PROJECTS

CRM–ERP ELT Data Warehouse Pipeline | Python, MySQL, Medallion, FastAPI, Pytest | GitHub 2026

- Built a modular ELT pipeline (uv run python -m src.pipeline) that loads six CRM and ERP source CSVs through Bronze, Silver and Gold layers in MySQL, with YAML-driven source mappings, ingestion tracking and repeatable runs.
- Automated Silver-layer cleaning, validation, standardization and deduplication; modeled Gold as star-schema customer and product dimensions plus a sales fact table, documented in a data catalog.
- Implemented data-quality checks for required-field nulls, duplicate business and surrogate keys, cross-layer row counts and foreign-key integrity, covered by Pytest unit, dashboard and database-backed integration tests.
- Developed a five-page FastAPI, Jinja and SQLAlchemy operations dashboard showing pipeline health and lineage, run timings and logs, data-quality results and database health; kept credentials out of Git via local config and .env files.

ELT Lakehouse with PySpark and Delta Lake | Python, PySpark, Delta Lake, uv | GitHub 2026 (ongoing)

- Building a config-driven lakehouse pipeline on synthetic Olist-schema e-commerce data: generators produce the datasets, Bronze ingests them into Delta tables, and Silver casts and validates them with Spark.
- Defined JSON schema contracts to drive type casting and validation instead of hardcoded types, with structured logging across stages.
- Built a single-command CLI runner (build pools, build dataset, Bronze, Silver, or the full pipeline) managed with uv; Gold layer and orchestration are planned next.

LinkedIn Job Scraper | Python, Playwright, BeautifulSoup | GitHub 2025

- Built a Python scraper using headless Chromium (Playwright) and BeautifulSoup to collect job titles, companies, locations and application links from JavaScript-rendered LinkedIn listings, with pagination across result pages.
- Added result deduplication and CSV/JSON export, plus a command-line interface (query, location, max results, output path) alongside interactive and programmatic modes.

Instagram Reel Auto-Scroller | Python, Selenium WebDriver, Docker | GitHub 2025

- Automated Chrome with Selenium WebDriver, detecting reel duration via JavaScript hooks; containerized with Docker Compose as separate, reproducible script and Selenium/Chrome services.

VIRTUAL EXPERIENCE

Data Analytics and Visualization Job Simulation 2024
Forage – Accenture North America

- Cleaned and modeled multi-source datasets to surface actionable business insights in a simulated client engagement.
- Designed and delivered executive-level data visualization presentations, translating technical findings for non-technical stakeholders.

ACHIEVEMENTS

1st Prize, Code Clash League – CodeClub, Dept. of CSE, Integral University (team of 2) Oct 2026

TECHNICAL SKILLS

Languages: Python, SQL
Data Engineering: ETL/ELT Design, Medallion Architecture, Lakehouse Design, Dimensional Modeling (Star Schema), Schema Contracts, Schema Normalization, Structured Logging
Big Data: PySpark, Delta Lake, Parquet
Databases: MySQL, SQL Server, PostgreSQL
Testing/Automation: PyTest, Data Validation, Data Quality Checks, Selenium WebDriver, Playwright
Libraries & Frameworks: Pandas, NumPy, FastAPI, SQLAlchemy, BeautifulSoup
Tools: Git, GitHub, Docker, Docker Compose, uv
Cloud (Foundational): Azure, AWS
